2014 inFlight Guide Brian C Rogers

The most complete, comprehensive, and easy-to-use disc golf flight chart available!

The inFlight Guide is the only disc flight resource that you'll ever need. The inFlight Guide is the Rosetta Stone of flight charts. Disc flight data contained in the guide comes from a total of 19 different flight charts and rating systems with as many as six different sources being applied to any one disc. Using multiple data sources has a smoothing effect on a disc flight path and eliminates outlier values caused by unnecessary bias, flight testing extremes, and minor rating errors, creating the most reliable flight data available as the "Relative Stability Scale". The easy to understand inFlight disc flight numbers are universal and can be applied to all manufacturers, instead of relying on a separate scale for each company.

How the inFlight Guide is Different

The inFlight Guide uses the "Relative Stability Scale" to model the flight path of each disc. Unlike other flight charts that utilize an arbitrary numbering system to describe different aspects of a disc's flight, the Relative Stability Scale shows flight characteristics relative to the expected minimum and maximum range of values and are displayed as a %. While certain things, such as glide, are important, the Relative Stability Scale simplifies the flight values and summarizes each disc based only on the following:

- **High-Speed Turn** – High-Speed Turn occurs during the first part of flight when the disc is traveling the fastest, with the most spin, and is the amount to which a disc will turn to the right. The lower the % (especially negative %), the greater the likelihood the disc will bank right (and/or turn over) during the initial portion of flight.
- **Low-Speed Fade** – As the disc begins to slow down near the end of its flight and as the amount of spin decreases, the Low-Speed Fade is the amount to which a disc will bank left. The higher the %, the more the disc will hook left.
- **Net Stability** – Net Stability takes into account the total effect of both High-Speed Turn and Low-Speed Fade to provide the relative stability of a disc and helps to demonstrate the probable left-to-right position of the disc at the end of its flight. The discs with the highest % will be the most overstable and the discs with the lowest % will be the most understable, with varying levels of overstable, stable, and understable in between.
- **Distance** – Expected average distance achievable for a given disc, assuming the disc is thrown at the appropriate arm speed and power level.

Where the Numbers Come From

The values for the Relative Stability Scale come from numerous sources including manufacturer flight ratings and hands-on, experiential data based on the results of field testing by seasoned disc golfers. The values for each of the various data sources are then normalized, aggregated, and averaged to provide a comprehensive, relative picture of a disc's expected flight path.

Additional Features

- Flight charts and data for nearly 540 discs
- Matrix view showing distance vs. net stability for each disc

- Includes data for current and out-of-production discs
- PDGA specs for all PDGA approved discs in the guide
- Flight information for discs by 41 manufacturers
- Grid-based chart to show not only the flight path and distance, but where the disc will travel on the X-axis, relative to its starting point
- Important documentation related to the assumptions regarding flight values, the flight rating system, and the factors that will affect disc flight and influence how the flight charts are to be interpreted

From reader reviews:

David Hyman:

What do you concerning book? It is not important along? Or just adding material when you require something to explain what your own problem? How about your time? Or are you busy man or woman? If you don't have spare time to try and do others business, it is give you a sense of feeling bored faster. And you have free time? What did you do? Everybody has many questions above. They have to answer that question mainly because just their can do that. It said that about e-book. Book is familiar in each person. Yes, it is right. Because start from on jardín de infancia until university need this specific 2014 inFlight Guide to read.

Madeleine Bandy:

In this period of time globalization it is important to someone to receive information. The information will make a professional understand the condition of the world. The condition of the world makes the information simpler to share. You can find a lot of recommendations to get information example: internet, newspapers, book, and soon. You can view that now, a lot of publisher which print many kinds of book. The particular book that recommended to you personally is 2014 inFlight Guide this e-book consist a lot of the information from the condition of this world now. This kind of book was represented how do the world has grown up. The terminology styles that writer use for explain it is easy to understand. The particular writer made some research when he makes this book. That is why this book acceptable all of you.

Jose Laney:

As we know that book is very important thing to add our expertise for everything. By a reserve we can know everything we would like. A book is a list of written, printed, illustrated or blank sheet. Every year has been exactly added. This reserve 2014 inFlight Guide was filled with regards to science. Spend your extra time to add your knowledge about your science competence. Some people has diverse feel when they reading some sort of book. If you know how big selling point of a book, you can feel enjoy to read a publication. In the modern era like today, many ways to get book which you wanted.

Brian Rutt:

As a pupil exactly feel bored in order to reading. If their teacher inquired them to go to the library or even make summary for some reserve, they are complained. Just minor students that has reading's soul or real their hobby. They just do what the teacher want, like asked to go to the library. They go to right now there but nothing reading really. Any students feel that looking at is not important, boring and can't see colorful photos on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this period of time, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore , this 2014 inFlight Guide can make you sense more interested to read.
