The Thermodynamics of Phase and Reaction Equilibria Ismail Tosun

This book provides a sound foundation for understanding abstract concepts of phase and reaction equilibria (e.g. partial molar Gibbs energy, fugacity, and activity), and shows how to apply these concepts to solve practical problems using numerous clear examples. It also presents numerical methods necessary for solving real-world problems as well the basic mathematics needed, facilitating its use as a self-study reference work. In the example problems requiring MATHCAD® for the solution, the results of the intermediate steps are given, enabling the reader to easily track mistakes and understand the order of magnitude of the various quantities involved.

- Clear layout, coherent and logical organization of the content, and presentation suitable for self-study
- Provides analytical equations in dimensionless form for the calculation of changes in internal energy, enthalpy, and entropy as well as departure functions and fugacity coefficients
- Includes up-to-date information, comprehensive in-depth content and current examples in each chapter
- Includes many well organized problems (with answers), which are extensions of the examples enabling conceptual understanding for quantitative/real problem solving
- Includes the mathematical background required for solving problems encountered in phase and reaction equilibria
- Provides an instructor's solutions manual

From reader reviews:

Carissa Ware:

Information is provisions for people to get better life, information these days can get by anyone in everywhere. The information can be a expertise or any news even a huge concern. What people must be consider while those information which is inside the former life are difficult to be find than now is taking seriously which one is appropriate to believe or which one the particular resource are convinced. If you get the unstable resource then you get it as your main information there will be huge disadvantage for you. All of those possibilities will not happen within you if you take The Thermodynamics of Phase and Reaction Equilibria as your daily resource information.

Shaun Richards:

Playing with family in a park, coming to see the ocean world or hanging out with pals is thing that usually you may have done when you have spare time, subsequently why you don't try factor that really opposite from that. Just one activity that make you not sense tired but still relaxing, trilling like on roller coaster you are ride on and with addition associated with. Even you love The Thermodynamics of Phase and Reaction Equilibria, you can enjoy both. It is very good combination right, you still desire to miss it? What kind of hang type is it? Oh seriously its mind hangout folks. What? Still don't have it, oh come on its identified as reading friends.

Judy Bowen:

Reading a book to become new life style in this season; every people loves to go through a book. When you read a book you can get a great deal of benefit. When you read ebooks, you can improve your knowledge, due to the fact book has a lot of information onto it. The information that you will get depend on what kinds of book that you have read. If you would like get information about your analysis, you can read education books, but if you want to entertain yourself read a fiction books, this kind of us novel, comics, along with soon. The The Thermodynamics of Phase and Reaction Equilibria will give you a new experience in reading through a book.

Alma Medina:

As we know that book is very important thing to add our knowledge for everything. By a reserve we can know everything we wish. A book is a set of written, printed, illustrated as well as blank sheet. Every year had been exactly added. This guide The Thermodynamics of Phase and Reaction Equilibria was filled with regards to science. Spend your spare time to add your knowledge about your technology competence. Some people has several feel when they reading a book. If you know how big benefit from a book, you can experience enjoy to read a reserve. In the modern era like currently, many ways to get book you wanted.
