## **Image Fusion: Theories, Techniques and Applications** H.B. Mitchell

The purpose of this book is to provide a practical introduction to the theories, techniques and applications of image fusion. The present work has been designed as a textbook for a one-semester 3rd-year undergraduate, or 2-year graduate, course in image fusion. It should also be useful to practising engineers who wish to learn the concepts of image fusion and apply them to practical applications. In addition, the book may also be used as a supplementary text for a graduate course on topics in advanced image processing. The book complements the author's previous work on multi-sensor data [1] fusion by concentrating exclusively on the theories, techniques and applications of image fusion. The book is intended to be self-contained in so far as the subject of image fusion is concerned, although some prior exposure to the field of computer vision and image processing may be helpful to the reader. Apart from two preliminary chapters, the book is divided into three parts.
